Small and portable on the outside:

A complete wireless classroom inside.

The new eClass2go.

Freedom to learn.

A new vision in education.

- Ultra-mobile classroom – supports wireless network learning in any location
- Easily movable – with carry handles and trolley for wheeling between rooms or buildings
- New flexible design – modular system adapts to suit any need
- Fully customisable – with a tailored choice of PCs and devices
- Highly secure – sturdy lockable aluminium case protects against theft and damage

eClass2go

TOSHIBA

A mobile learning solution, bringing freedom to learn anytime, anywhere.

Toshiba is committed to supporting education with state-of-the-art solutions that deliver maximum mobility and freedom. Now, with the acclaimed eClass2go box, computer-based learning enters a new dimension.

eClass2go is a unique mobile learning solution that means liberation from cable-based connectivity. When equipped with your choice of notebook PCs, peripherals, plus a wireless-enabled server to support remote intranet and Internet access, it contains all the tools needed to learn anytime, anywhere. And its flexible modular design means you can adapt the system to suit any location or requirement.

Moves easily for use anywhere

Based on a trolley fitted with castors, the eClass2go can be transported from room to room, or building to building, enabling a wireless network to be established anywhere. There is no longer any need for a dedicated computer classroom – simply wheel the eClass2go to where it's required, plug in one power cable and one Internet link, and the whole classroom network is wirelessly linked, online and ready to go.

Modular design gives maximum flexibility

Equip the modular eClass2go to suit your needs – and extend it as requirements change. The system comes in three units: the Base Module with compartments for up to ten notebook PCs, a Server Module housing one server, two further notebooks, and peripherals such as a printer, projector or scanner, and the Extension Module that offers storage for another ten notebooks. The units stack neatly on top of one another, with carry handles enabling each to be easily lifted or removed for storage.

Secure yet lightweight construction

Together the units require minimal floor space yet provide generous storage capacity. Made from sturdy, lightweight aluminium, each case is fully lockable to protect the contents from theft. Inside, Kensington Cable Locks provide additional security for equipment, while optional Velcro® fastening belts quickly and effectively secure notebooks when the eClass2go is on the move between locations.
